VMEU H.M. DOWN STATION

PROJECT SUMMARY

This project involves services by an outside contractor for abatement and disposal of the asbestos pipe insulation from the basement area of the Old Plant steam turbines #4, 5 & 6 in accordance with the applicable regulations. This section of the plant was built in the 1930's has been shut down since 1990.

An EPA/AHERA Licensed Asbestos Project Designer/ Inspector has been retained to provide necessary oversight and inspection services for proper execution of the project. He has also prepared the attached Technical Specifications for asbestos abatement of the subject area.

Completion of this project will enable the Old Plant turbine section of the plant to be free of asbestos containing materials (ACM). This will allow the removal of the # 4, 5 & 6 turbines to free up floor space for future useful purposes.
